

Bucket spraying pump

A 10

B 10

Fighting fires effectively - with robust and proven Made in German technology

These are true classics from NEURUPPIN: tried-and-tested and virtually indestructible portable bucket spraying pumps A 10 and B 10. Compared to modern fire extinguishers, these units are just incredibly easy to operate, a great benefit: Water or an aqueous solution reaches the extinguishing nozzle through the hose via the hand-operated, double-acting piston pumping unit made of corrosion-free brass. The 7-10 m extinguishing agent jet enables targeted extinguishing of solid fires (class A) for a duration of 55 seconds. The container can be quickly refilled for continued operation if required, via the stable, hinged lid.

Simple, tried-and-tested and requiring little maintenance – extinguishing is child's play

There are many reasons why NEURUPPIN bucket spraying pumps are still in demand, even at times of modern fire extinguishers: For example, with A 10 and B 10, fires can be combated anywhere around the world where clean water is available. Bucket spraying pumps do not need a pressure cartridge, nor do they need any specially produced extinguishant. After use, no specialist is required to prepare it for its next time in operation - instead, just clean it using standard household cleaning agents. Also, bucket spraying pumps do not have to comply with the Pressure Vessel Regulation.

Applications

- Fire-fighting for fire classes A
- Fire brigades for young people, schools, companies that provide fire safety training
- Marine and maritime operations
- Agriculture
- Timber-processing businesses
- Workshops
- Private areas
- Camping, campfires
- Small gardens
- Disaster and earthquake areas
- Military deployment areas

Special advantages

- Made in Germany – high-quality and reliable based on more than 100 years of proven NEURUPPIN tradition
- Zero-maintenance autonomous fire protection – after use, no need for professional maintenance work or the purchase of replacements
- Very economical to operate – virtually no maintenance cost, even after fire-fighting operations
- Durable and robust – steel body, brass pressure pump and robust processing all promise an extremely long service life
- Double corrosion protection – flame-galvanized containers and polyester resin quality coating (external)
- Self-explanatory functionality – fill with water through the hinged lid then fight the fire with a jet of water
- Can be refilled immediately – if necessary, simply refill the bucket and continue to fight the fire
- Two variants are available – A 10: 5 m D-hose with DK jet pipe, B 10: 1 m water hose with mouthpiece
- Extinguishing action can be extended with an additive – by mixing it with special additives such as NEURUPPIN F-500 concentrate with water (approx. 2-6%) or through the use of ready-mixed extinguishants such as frost-protected NEURUPPIN F-500 2% Premix -30/60°C which can further boost effectiveness when fighting fires
- Approvals – DIN EN 3, DIN 14 405, GS
